EDUCATION

Singapore University of Technology and Design (SUTD)

Singapore

B.Sc. (Hons) Computer Science & Design, Minor in Artificial Intelligence

Aug 2023 – Present

- Relevant coursework: Computer Security, Machine Learning, Distributed Systems, Software Engineering, Computer Networks, Algorithm Design, Database Systems
- Certifications: Cisco Certified Network Associate (CCNA) · OSCP (in progress) · Active on HackTheBox & CTF competitions

EXPERIENCE

Ministry of Defence (MINDEF), Singapore

Singapore

Cybersecurity Research Intern

Sept 2025 – Jan 2026

- Mapped the complete Sysmon event pipeline from kernel callbacks through ETW providers and minifilter drivers to EVTX storage using WinDbg, fltmc, and PerfMon.
- Reverse-tested Sysmon configuration filtering logic and identified detection bypass surfaces; reproduced documented evasion techniques in isolated lab environments to validate detection gaps.
- Investigated RF signal behaviour, Wi-Fi protocols, and drone communication systems to surface system-level vulnerabilities.
- Structured findings into a formal technical presentation delivered to senior defence stakeholders.

Etiqa Insurance, Singapore

Singapore

Freelance Developer

Jan 2025

- Built automated budgeting and financial tracking tools for internal use, streamlining manual reporting workflows.
- Developed a fairness-auditable lucky draw algorithm with full transparency controls; deployed for live internal use at the company.

Ministry of Defence (MINDEF), Singapore

Singapore

Software Developer Intern

Apr 2024 – Jul 2024

- Designed and implemented automated contract monitoring systems with secure login validation, role-based permission controls, and full audit trail support.
- Built automated email notification pipelines for end-to-end contract lifecycle tracking, reducing manual follow-up overhead.
- Strengthened data integrity mechanisms and implemented structured access control frameworks across internal tooling.

PROJECTS

Sysmon Config Analyser

Sept 2025 – Present

Python, Windows Internals, ETW, WinDbg | github.com/yeelaiiii/sysmon-config-analyser

- Built a Python CLI tool that parses Sysmon XML configs and flags missing high-priority event IDs, overly broad exclusion rules, and LSASS monitoring gaps with CRITICAL/WARNING severity output.
- Directly informed by kernel-level research at MINDEF; zero external dependencies with JSON export for SIEM integration.

ML Food Wastage Prediction System — Best Project / 200 Teams

2024

Python, Flask, scikit-learn, GCP | github.com/yeelaiiii/Food_Predictor_App

- Trained and deployed an ML model predicting food wastage, integrated into a full-stack Flask web app with end-to-end data pipeline, feature engineering, and GCP deployment.
- Awarded Best Project out of 200 competing teams.

Full-Stack Hotel Booking Platform

2025

React, Node.js, Express, MongoDB, MySQL, TypeScript | github.com/DarrenTangent/esc_ascenda_project

- Built a travel booking platform with React frontend, Node/Express backend, and dual MongoDB/MySQL database architecture; implemented dynamic search, filtering, booking logic, and loyalty programme integration.

Modulus — SUTD Academic Planner (Android)

2025

Java, Android, SQLite | github.com/p-ineapple/Modulus

- Contributed to a mobile app that simplifies SUTD academic track planning, consolidates deadlines and exams into a unified calendar, and provides peer course reviews.

FELIX — FPGA Reaction Game

2025

Lucid HDL, FPGA, Finite State Machines | github.com/yeelaiiii

- Designed a real-time LED memory game on an Alchitry FPGA with a custom CPU, FSMs, and full hardware-level timing control in Lucid HDL.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, C, SQL

Frameworks: React, Node.js, Express, Flask, Android SDK

Databases: MongoDB, MySQL, SQLite

Security: Windows Internals, Sysmon/ETW, WinDbg, fltmc, Black-box Testing, RF/Wi-Fi Analysis, CTF (binary exploitation, log analysis, forensics)

ML & Data: scikit-learn, Pandas, NumPy, Feature Engineering, GCP

Hardware: FPGA (Lucid HDL), Finite State Machines, Custom CPU Design

Tools: Git, Linux, HackTheBox, Wireshark, PerfMon, Android Studio

Certifications: Cisco Certified Network Associate (CCNA) · OSCP (in progress)

AWARDS & ACHIEVEMENTS

- Best Project out of 200 competing teams — ML-Based Food Wastage Prediction System (2024)
- VEX Robotics World Champion 2017 — represented Singapore internationally
- National Weightlifter — Singapore (SWF registered athlete)
